**Subject: Consumer Product Safety Improvement Act of 2008**

Dear Sir/Madam,

Sony DADC wishes to inform you that it has been working diligently with consumer product safety specialists, industry representatives, and its customers to assure compliance with the newly enacted 2008 Consumer Product Safety Improvement Act ("CPSIA"). This legislation institutes new testing and certification requirements for manufactured goods deemed to be children's products, toys or other such items imported or distributed in commerce that qualify as being subject to safety rules, bans, standards or regulations enforced by the Consumer Products Safety Commission ("CPSC"). As such, Sony DADC is fully committed to complying with the CPSIA and all other applicable laws. To this end, Sony DADC has completed testing on each of its products and standard packaging configurations, including all constituent elements such as cases, artwork and applied labeling. All of the aforementioned testing was conducted at CPSC-approved third party laboratories. The test results indicate that each of Sony DADC's products, as described above, meet all current lead paint and lead content standards as well as those intended to be put into effect between now and 2011. These results also indicate that the levels of phthalates in Sony DADC's products, as defined above, are significantly below any allowable limit prescribed by the CPSC. Sony DADC intends to repeat this product testing on a quarterly basis and to post the required conformity certificates for the products covered by these tests on the Sony DADC website at [www.sonydadc.com](http://www.sonydadc.com). Please feel free to direct your customers to this website. Furthermore, in an effort to stay ahead of changes to CPSIA regulations or other regulatory requirements, Sony DADC, through its "Green Partner" program, also ensures that certain unwanted chemicals (including lead and phthalates) are not present in both the raw materials and components used to manufacture and package all of its products, not just those considered applicable to CPSIA regulations.

Although Sony DADC is able to certify that the products it manufactures comply with CPSIA regulations (provided all elements of such products are sourced by Sony DADC), Sony DADC also needs to be certain that any other items that it packages with its products are compliant as well. Therefore, if and when you send to Sony DADC any items to be included with Sony DADC's products, please first indicate whether any such item is a children's product or a children's toy. If any of the items you provide are classified as such, please also include a copy of the conformity certificate for each relevant item. Without such compliance certificates in hand, Sony DADC will be unable to perform the requested manufacturing services. Furthermore, please note that the CPSC-approved third party testing data that supports the results indicated on the certificate must be available upon request. Finally, for any items that you provide to Sony DADC that are not considered children's products or children's toys (such as special packaging elements, inserts and other items) but which are intended to be included with such products, Sony DADC will require copies of the third party test data, though a formal certificate is not necessary.

Please note that the requests defined herein apply to all children's products, or other materials supplied to Sony DADC to be included with any children's product, that are to be shipped on or after December 21, 2008. Thank you in advance for your cooperation.

Sincerely,

**Sony DADC**Michael Mitchell  
Executive Vice President  
Chief Technology Officer
